

Remanufactured Locomotive Compressors

The Standard in Railroad Reman Compressors

When it's impractical to install a factory new compressor or repair an older unit, a guaranteed Gardner Denver Factory Remanufactured Locomotive Compressor is the perfect alternative.

The key word is "remanufactured." All Gardner Denver Remanufactured compressors receive the same stringent processing as our new products. With over 70 years of successful locomotive compressor business experience, we know which parts wear and why.

Locomotive Compressors Are Remanufactured to Current Factory Specifications in Our Dedicated Remanufacturing Facility.

We first inspect and analyze all of the compressor components. Each part must meet exacting specifications to insure total compatibility and reliable performance. Slightly different tolerances or wear on even the smallest or least expensive part can be the weak link in your compressor and later this weak link can cause you costly problems.

Because of this fact, wrist pins, compression and oil control rings, main bearings, connecting rod bearings, seals, filters, and gaskets are ***automatically replaced*** with genuine Gardner Denver factory new assemblies.

As needed, we also replace crankshaft, cylinders, pistons, and other potential wear items. Any parts that meet specifications are thoroughly cleaned, inside and out and warranted the same as new parts.

Experience Proven Results™

Gardner Denver Remanufactured Compressors

THE COST EFFECTIVE SOLUTION

Gardner Denver remanufactured compressors are an excellent cost saving alternative to purchasing a new compressor. We remanufacture the following units:

All WBO Series Units

Three Cylinder Air Cooled

Three Cylinder Water Cooled

Four Cylinder Compressor

Four Cylinder Compressor/Exhauster

Six Cylinder Compressor

Six Cylinder Compressor/Exhauster

Our remanufactured compressors are built to meet the original product specifications and tested to the same requirements as a new compressor. Gardner Denver can also provide the following upgrade options that can be installed on your remanufactured compressor.

- Plunger Pump to Gear Pump
- Standard Piping to Flex Hose
- Half Jacket Cylinders to Full Jacket Cylinders
- Old Style Intercoolers to Welded Plate Intercoolers
- LP and HP Suction and Discharge Valve to the Concentric Valve
- Blue Hose Kit
- Cam Ground Piston to Round Piston
- Installation of Motors

ALL GARDNER DENVER REMANUFACTURED UNITS CARRY A FULL ONE YEAR WARRANTY.

Buy Gardner Denver remanufactured locomotive compressors for a new level of service, quality and parts integrity.
